Title : On the Solubility of Chromite in Sulfuric Acid.

Orig Pub : Kemija u industriji, 1957, 6, No 7, 189-191

Abstract : The possibility of chromite (I) dissolution in a little excess of H₂SO₄ (50%) in presence of compounds of 6-valent Cr was investigated. The yield of solute Cr depends very much on the dispersion of I. The yield is 67.5%, if the particle size was about 100 μ and it rises gradually with the dispersion increase. An addition of Fe neutralizes the solution. The method of using an excess of acid was used for the preparation of crystalline ferrosulfate and of the salt of 3-valent Cr with the necessary degree of acidity.

AUTHORS: Vol'berg, L. P., Vol'pe, R. I., Pakaln, Ya. K.

TITLE: Method and Working Organization for the Renewal of Topographic Maps (O metodike i organizatsii rabot po obnovleniyu topograficheskikh kart)

PERIODICAL: Geodeziya i kartografiya, 1959, Nr 4, pp 31-35 (USSR)

ABSTRACT: Considering the immense increase in the building activity in all sectors of national economy, a systematic renewal of topographic maps in series is necessary. When the renewal of these maps was started in 1957, only a few copies of the project of regulations for the renewal of topographic maps on scales of 1 : 25000, 1 : 50000 and 1 : 100000 were available. These regulations, however, cannot be used for a renewal of maps on a large scale. Some deliberations for the organization and methods of renewal of topographic maps are brought here. The experience, particularly in 1958, showed that such a renewal should be carried out primarily on the basis of aerophotographic plans composed according to aerial photographs of the latest photographic flights. In advance, the relief of the map to be renewed must be transferred to these aerophotographic plans. The spatial model of the landscape can be directly obtained on the aerophotographic plan according to

Card 1/3

SOV/6-59-4-9/2o
Method and Working Organization for the Renewal of Topographic Maps

the procedure suggested by V. I. Argentov and V. I. Buraya which also improves the quality of the product. Concerning the experience in the renewal of the aerophotographic plans on a scale of 1 : 10000 on the basis of earlier aerophotographic plans, reference is taken to the paper by N. M. Pazel'skiy (Ref 1). All geodetic, cartographic, statistic, and descriptive papers available at various authorities, local organizations and administrations, should be most carefully collected. But - as the working experience of the topographical squads of the MAGP shows - even under these conditions it is, in a number of cases, not possible to prepare aerophotographic plans on the basis of aerial photographs of latest photographic flights in indoor service only. Besides, the experience shows that the aerial photographs for the renewal of topographic maps should be made one year before starting the field work. The experience of 1958 showed that the data of the aerial photograph arrive much too late if the aerial photograph is made in the same year as the renewal of the map. Some deliberations concerning the organization of the work for the renewal of maps by the topographical squads are brought here. The times are indicated according to experience. A topographical brigade

Card 2/3

SCV/6.50-4-9/20

Method and Working Organization for the Renewal of Topographic Maps

occupied with the renewal of maps should comprise 2 - 4 workers besides the topographer. To improve the organization it is suggested to subdivide the work. In the transfer of the relief representation from the original of the map to be renewed to the aerophotographic plan devices for optical design should be used to increase the capacity. Such devices are much in use in the subsections of the VTS, but they are missing in the topographical squads at present. All preparatory work can be done by the indoor service in winter. To avoid waiting time, a new organization of the work by the brigades is suggested in two variants according to difficulties, geographical conditions, map scale, experience of the topographer, and means of transportation by car as well as road systems.

There is 1 Soviet reference.

soviet NTO (Sverdlovsk Regional Council of NTO); it was attended by more than 250 delegates who heard a large number of papers on the corrosion of stainless steel and preparation of new corrosion-resistant alloys. As well as discussions in the exhibition of chemical equipment by production organizations. The conference also adopted a series of measures for improving the performance of equipment made by plants manufacturing chemical and petroleum machinery, as well as reducing losses due to corrosion, and substituting difficultly available materials at plants in the chemical, petroleum refining, and all other branches of industry. The conference also recommended the use of new, corrosion-resistant materials in construction of chemical equipment, such as stainless steel, aluminum, and magnesium. It was decided to establish a committee to study the problem of corrosion resistance of materials used in construction of chemical equipment.

Title : Sketch of the History of Zoology at the University of Kharkov.

Orig Pub : Uch. zap. Kharkovsk. un-ta, 1955, 59, 81-122.

Abst : The History of the development of the science of zoology at the university of Kharkov for the past 150 years is described. The activities of I.A. Krinit斯基, A.V. Chernaya, A.F. Brandt, N.N. Somov, A.M. Nikolskiy, P.P. Sushkin, V.V. Stanchinskiy, I.B. Volchanetiskiy, G.F. Arnol'd E.E. Umanskiy, and others is characterized in detail. As part of the activities of the Kharkov zoologists before the Great October Revolution were the investigations of the fauna of the Kharkov Area and other parts of the Ukraine and Russia, the description and systematization of the

species of the various representatives of the vertebrate and non-vertebrate animals and so forth. In the Post-Ocotber period, a reorganization of the instruction and scientific-research work in all divisions of biology at the university of Kharkov is being carried out. Simultaneously with the study of the fauna of the southern areas of Ukraine, considerable attention has been given to the solution of the theoretical problems of zoology and biology, in particular those of ecology and biotsenology. The work of the faculties of zoology of vertebrate and nonvertebrate animals, entomology, and ecology connected with the names of A.M. Nikol'siy, P.P. Sushkin, G.F. Arnol'd, V.A. Yaroshevskiy, N.I. Kalabukhov, and others is described in detail. A list of works (331 titles) of zoologists of the university of Kharkov is provided.

AUTHOR: Kir'yashkina, Z. I.; Rokakh, O. G.; Volchanin, Ye. M.

TITLE: The effect of moisture on the conductivity of CdS films doped with CdCl₂
(brief communication)

SOURCE: Ukrayins'kyi fizichnyi zhurnal, v. 9, no. 3, 1964, 342-343

TOPIC TAGS: CdCl₂-doped CdS, moisture sensitive CdS film, cadmium sulfide film,
cadmium chloride doped, cadmium sulfide film

ABSTRACT: An attempt was made to explain the sensitivity of the electrical conductivity of CdCl₂-doped CdS films to atmospheric moisture. The sensitivity, manifested as a sharp minimum in the conductivity between 60 and 70°C, is greatest for the largest doping concentrations, and is absent in lightly-doped samples. The effect is also absent in a vacuum. The conductivity of the heavily-doped samples decreases in a vacuum, and that of the lightly-doped samples increases. Two competing processes, the effect of moisture and the evolution of oxygen in the evacuated chamber occur. All of these factors lead the authors to the conclusion that the drop in conductivity of moisture-sensitive samples between 60 and 70°C is due to a "desiccation" [drying-out] of the film (thickness about one micron). Author : Levi, M. I.; Kislyakova, L. N.; Gusev, V. M.; and Volchanetskaya, G. I.

Title : Investigation of rodents and their ectoparasites in foci of lymphocytic choriomeningitis

Periodical : Zhur. mikro. epid. i immun. 7, 44, Jul 1954

Abstract : The duration of the existence of lymphocytic choriomeningitis foci, the species of rodents found at the foci, and their ectoparasites were investigated from 1950 to 1952. Forty-nine strains of the virus of lymphocytic choriomeningitis were isolated from 369 house mice, common voles, and forest mice trapped at all seasons of the year in residences and industrial facilities where cases of the disease had been reported. No traces of the virus were found in cultures prepared from the various fleas and ticks living on these rodents. The species of the ectoparasites encountered are indicated. No references are cited.

VOLCHANOV, S. F.

Glass corundum. I. I. KITAIGORODSKIY, N. V. SOLOMIN, A. I. POLINKOVSKAYA, AND S. F. VOLCHANOV. Ogneupory, 13(1) 22-25 (1948).- In the laboratory, technical alumina was mixed with 1% ZnO and fired to 1450°C. to insure maximum transformation of γ -alumina to α -alumina prior to mixing the charge. Organic binder (not specified) and water were added to the charge in amounts required for semidry ramming (hand and pneumatic), and the bars were fired at 1460° to 1590°. For comparison, bars were prepared from 77% Chasov Yar clay grog and 23% Chasov Yar binding clay. Compared with the multigrog product, the glass corundum had a firing shrinkage 7 to 8 times as large, an apparent porosity 2 to 3 times as large, and a resistance to sulfate liquors 12 to 23 times as great. Sulfite-cellulose extract is recommended as a plasticizer because of its slow decomposition within a wide temperature range. The firing shrinkage was considerably improved by firing a portion of the charge in the form of briquettes, grinding the briquettes, and adding the glass-cement grog in amounts of 50 to 86% to the original charge. On a commercial scale, use was made of technical alumina analyzing not less than 97.3% Al₂O₃, not over 0.4% SiO₂, not over 0.06% Fe₂O₃, not over 0.7% Na₂O, and ignition loss about 1.5%. As a glass binder, cullet of ordinary composition was used. Bars were prepared by pneumatic ramming. Air shrinkage was less than 1%. Products were fired for ten days and held for 24 hr. at a maximum temperature of 1500° to 1520°C. The properties were better than those of laboratory specimens; bulk specific gravity was 3.05, and apparent porosity was about 14%. B.Z.K.

Orig Pub: Izv. In-ta biol. Bolg. AN, 1957, 8, 281-290.

Abstract: Neurolytic serum (NS) was obtained by means of immunization of rabbits with the tissue of the brain of guinea pig. Undiluted NS (titer 1:512) inhibited in vitro the phagocytic activity of the leucocytes of guinea pig. In dilution of NS to 1:8 and higher, NS started to activate phagocytosis (P); in dilution to 1:32, P increased by 60%. Normal rabbit serum in presence of luminal (2%)
